Power BI

Session 5

Power BI

Power BI is a powerful business analytics tool developed by Microsoft that allows you to connect to various data sources, transform and clean the data, and create interactive visualizations and reports.

Power BI

What does PowerBI?

Power BI enables users to:

- Connect to multiple data sources (Excel, SQL, SharePoint, cloud databases, etc.)
- Clean and transform data using Power Query
- Create interactive visuals like charts, maps, and tables
- Share insights via dashboards, reports, and Power BI Service (cloud)
- Set up real-time data monitoring with live dashboard

Key Components of Power BI:

- Power BI Desktop: A free Windows app for creating reports and data models
- Power BI Service: Online platform to share and collaborate on dashboards and reports
- Power BI Mobile: Mobile app to view dashboards on phones or tablets
- Power Query: Tool to connect, transform, and clean data before visualization
- DAX (Data Analysis Expressions): A formula language used to create calculated columns, measures, and tables in Power BI (like Excel formulas, but more powerful for data models)

Power BI: example

Power BI Desktop:

- Installed on your PC (Windows app)
- Used to **build and author reports**
- Transform and clean data with **Power Query**
- Create relationships and **DAX calculations**
- Best for **development and testing**

Power BI Service:

- Web-based cloud platform
- Used to share and collaborate with others
- Create dashboards, schedule data refreshes, and set alerts
- Organize reports in workspaces and apps
- Best for distribution and monitoring

Power BI users will interact with the data and reports in the following Environments:

Power BI

Step 1: Check System Requirements

- Operating System: Windows 10 or later (64-bit recommended)
- Disk Space: At least 1 GB free space
- RAM: Minimum 4 GB (8 GB recommended)
- Internet: Required for download and updates

Step 2: Download Power BI Desktop

- Go to the official Microsoft Power BI Desktop download page:
<https://powerbi.microsoft.com/desktop/>
- Click the “Download free” button.
- You may be redirected to the Microsoft Store or get a direct installer (.exe).

TUTORIAL: [Power BI Tutorial - GeeksforGeeks](#)

Power BI

Basic workflows:

1. Connect to Data o Sources: Excel, databases, web APIs, cloud storage (like OneDrive), etc.
2. Transform Data o Use Power Query Editor to clean and shape your data (remove nulls, split columns, change types).
3. Build Visuals o Drag fields into charts, tables, maps, etc., and add filters or slicers for interactivity.
4. Create Reports o Combine visuals on report pages with titles, labels, and branding.
5. Publish to Power BI Service o Share reports online with team members or embed them in apps or websites.
6. Set Up Refresh and Alerts o Schedule automatic data refreshes or set alerts for KPIs.

Power BI: example

The dataset used in this analysis is the **Financial Sample** dataset, which contains **sales transaction records** for a company operating across multiple countries and market segments

700 lines
16 columns

Column Name	Description
Segment	Market segment where the product was sold (e.g., Consumer, Corporate, Government)
Country	Country in which the sale occurred
Product	Product name sold by the company
Discount Band	Level of discount applied (None, Low, Medium, High)
Units Sold	Number of units sold in the transaction
Manufacturing Price	Cost to manufacture one unit
Sale Price	Price at which one unit was sold
Gross Sales	Total sales value before discounts
Discounts	Total discount amount applied
Sales	Net sales value after discounts
COGS	Cost of goods sold
Profit	Profit from the transaction
Date	Date of the transaction
Month Number	Month of the sale (1–12)
Month Name	Name of the month
Year	Year of the transaction

Power Query: Transform

The imported data may not be ready for reporting. You can use Power Query to perform transformations like:

- Data cleaning (e.g., remove unwanted columns, invalid rows, etc.)
- Modify data formats (e.g., format datetime columns)
- Merge multiple data sources (e.g., combine multiple statements into one)
- Create calculated columns (e.g., create a financial metric like Net Profit and Operating Costs)

Power Query: Transform

- **Ribbon** - the top ribbon contains almost all of the data transformation options you need to shape your data. We will explore a few common transformations below.
- **Queries** - this lists all the queries you have set up for this report. For complex reports, you can organize queries into groups for better navigation and management.
- **Data view** - this is the main table containing the data for the selected query as well as a formula bar. A preview of the data is shown with only the first 1000 rows.
- **Transformation steps** - the right-hand pane contains each of the transformation steps that have been applied to the selected query. This allows you to keep track of each individual change that has been made to the data. You can insert, delete, and move steps around as needed.

The screenshot shows the Power Query Editor window with the following components and annotations:

- RIBBON**: A red arrow points to the top ribbon, which includes tabs like File, Home, Transform, Add Column, View, Tools, and Help. The Transform tab is active, showing various data transformation options.
- QUERIES**: A red arrow points to the Queries list on the left, which contains a single query named 'financials'.
- DATA PREVIEW**: A red arrow points to the central data preview table, which displays the first 1000 rows of data. The table has columns: Segment, Country, Product, Discount Band, Units Sold, and Manufacturer.
- TRANSFORMATION STEPS**: A red arrow points to the Query Settings pane on the right, which shows the transformation steps applied to the query. The steps listed are Source, Navigation, and Changed Type.

Segment	Country	Product	Discount Band	Units Sold	Manufacturer
1 Government	Canada	Carretera	None	1618.5	
2 Government	Germany	Carretera	None	1321	
3 Midmarket	France	Carretera	None	2178	
4 Midmarket	Germany	Carretera	None	888	
5 Midmarket	Mexico	Carretera	None	2470	
6 Government	Germany	Carretera	None	1513

DASHBOARD

Title

A screenshot of the Microsoft Power BI interface. The top ribbon shows tabs for "Fichier", "Accueil", "Insérer", "Modélisation", "Afficher", "Optimiser", "Aide", "Format", and "Données / Explorer". The "Insérer" tab is active, showing options like "Classeur Excel", "Catalogue OneLake", "SQL Server", "Entrer des données", "Dataverse", "Sources récentes", "Transformer les données", "Actualiser", "Nouveau visuel", "Zone de texte" (highlighted with a red box), and "Plus de visuels". Below the ribbon is a preview of a dashboard titled "Sales analysis" in a large, bold, red font. To the right of the preview are panels for "Filtres", "Zone de texte Mise en forme", and "Données". The "Filtres" panel has a search bar and a list of filters. The "Zone de texte Mise en forme" panel has a search bar and a list of text formatting options. The "Données" panel has a search bar and a list of data fields. The bottom of the interface shows a text formatting toolbar with options like font face (Segoe UI), size (44), bold (B), italic (I), underline (U), and alignment.

DASHBOARD

Answer questions: a. How many types of Products does the company have?

A table

The screenshot displays the Power BI interface for a 'Sales analysis' dashboard. The main canvas is empty. On the left, the 'Modèles de données' pane shows a list of tables: Product, Amarilla, Carretera, Montana, Paseo, and Velo. The 'Visualisations' pane on the right contains a search bar and a grid of visualization icons. The 'Table' icon (a grid) is highlighted with a red box. Below the icons, the 'Colonnes' section shows 'Product' selected. The 'Données' pane on the far right has a search bar and a list of fields. The 'Product' field is selected with a red box and a checkmark.
